4	~80	~70	~60

Figure 1. The effect of the concentration of the *Agrobacterium* suspension on the transformation efficiency of *Agrobacterium* strains. The *Agrobacterium* strains were grown in the YEA medium for 24 h at 28°C. The cell concentration of the strains was adjusted to 10⁸ cells/ml. The cell suspension was mixed with the plant tissue and the transformation efficiency was determined. The results were expressed as the mean ± SD of three independent experiments.

1. *Chlorophyll a* (Chl *a*)

Fig. 1. $\log_{10}$ of the number of *Salmonella* cells per gram of feed versus time (h) for the control and treated groups. The control group was not treated with any disinfectant. The treated group was treated with 100 ppm of 2,2,4,4-tetramethyl-3,5-dichlorophenol (TBC) for 10 min. The data were collected from three independent experiments, each with three replicates.
